

Swallow

1645.

An Almanacke, for the
yeere of our Lord God

1645.

Being the first after Bissextile or
Leapeyeere, and from the Worlds
Creation, 5575.

Calculated properly for the fa-
mous University and Towne of
Cambridge, but may in different-
ly serve for any other place
within this Kingdome.

*Astra regunt homines, sed Deus
astra regit.*

The Iudges sit not at *Westminster*.

In { *Hillary*
Easter
Trinity
Michaelmas } terme on { *Candlemas*
Ascension
Midsummer
All Saints. } day.

The Anatomy of Mans Body as the parts thereof

are governed by the twelve Signes;

V Head and face,

Necke and
throat:

Break, Ro-
macke, and
ribs.

Bowels
and belly.

Secret
members.

Knees,

Armes and
shoulders.

Heart and
backe.

Reines and
loynes.

Thighes.
Legs.

X The Feete,

Hilary { The first of *Hilary* Term shall be
One *January* the twenty three : } *Term.*
And on the twelfth of *February*,
This term doth end most certainly.

Easter { And *Easter* Term from *Easter* day,
The wednesday fortnight begins alway : } *Term.*
And when the *Ascension* day is past:
Til monday next this Term doth last.

Trinit. { On friday after *Trinity*
This Term begins assuredly : } *Term.*
And as our *Lawyers* all do write,
It ends the wednesday fortnight.

Mich. { If *Michaelmes* Term you seek to finde,
October the 23. now beare in mind : } *Term.*
It ends as I doe well remember,
The twenty eighth day of *November*.

Of a Yeare.

In all matters legall the yeare begins not with us untill the 25 Day of March, so that the yeare which both begin on the first of Ianuary, is the Iulian year instituted by Iulius Cesar.

Of a Day.

A Day in all legall or law matters is accounted but from sun to sun; so that one who hath a sum of money to pay on a set day by bond, need not tender his money either before or after sun. This kind of Day is that which we call an artificiaall day: but a day naturall is to be accounted from midnight to midnight, and so is the day to be reckoned for the indictments of murder.

Of the Prime.

Because many country people use to take observation from the Prime, concerning their weaning of cattell, I will briefly set downe what it is. The moon is said to be primed when she is 3. dayes and 18 hours old, being then in her halfe quarter, and 4. points of the compasse eastward from the sun.

A rule for Marriage.

When Advent Sunday commeth, marriage is forbidden till Hilary, or the 13. of Ianuary. Then at Sepruagesima it goeth out again untill Low Sunday. Afterwards, at Rogation it is also forbidden: but at Trinity-sunday it commeth in again, and so continueth untill Advent.

January hath xxxj. dayes.

Full moon the 2. day, about 6 in morning.
 Last quarter the 9 day, 14. min past 9 at night.
 New moone the 17 day, 10 min. past 7. at night,
 First quarter 24. day, 40 m. past 6 at night. (sooner,
 Full ☉ (eclipsed) 31. day, at 7 night, The Eclipse begins

And note that such or such a Sine is called the House of such or such a Planet ; because their Dominion is there, then else-where : and so it is also for the houses of the Heavens, when the whole Spheare is divided into twelve arts.

Swallow, 1645.

The day and houre of the Sunnes entrance
into the foure Cardinall fines this present
yeare, 1645.

First of the Spring.

¶ The Cardinall fines are Aries, Can-
cer, Libra, and Capricorn, being as it
were the hinges on which the yeare
hangeth, and by which it is divided
into foure Quarters.

fuch
then
Hea-
welvo

These quarters among the Iewes were called
Tekuphas, or *Conuersiones anni*, two of which fall
into the Equinoxies, when dayes and nights
are equall; and two into the Solstitiall points
wherein there is as it were *Solis statio*, because
for certain dayes together, the Sun seemeth to
stand still, the dayes not sensibly perceived ei-
ther to lengthen or shorten. The late Rabbins
of the Iewes doe most of them begin the yeare
from Autumn, as from its naturall head: but
the old Christian Fathers of the Church rec-
kon from the Spring.

The fine with which this quarter enters is
Aries, into whose first minute the Sun cometh
this yeare the 10 of March, at 15 min, past 3 in
the morning.

Swallow, 1645.

Of Summer.

The next quarter is Summer, the Cardinall sine belonging to it is Cancer, into which the Sunne entresth this yeare on the 11 day of Iune, about 7 a clocke in the morning. The chiefe domination is giben to Jupiter, next unto whom is Luna, a likelihood of many fine clere and pleasant dayes. Summer in the German tongue, is said to be *Summehr*, that is, *Plus solis*, or more Sun then at other time.

Of Autumne.

The next after Summer is Autumne, his sine is Libra, into which the Sun entresth on the 12 day of September, 34 min. past 9 at night, at which time the Sun enters into the first min. of Libra, and hath in the Periscope 27 degr. and 54 min. of Gemini, and the generall temper of season more variable then either Spring or Summer. For these be now y^e chiefe dominatozs, Mercury, Saturn Mars, & the Moone.

This quarter takes his name from the Latine word *Autumno*, which signifieth to make ripe. Or else it is *Autumne a bonorum anni augmentatione*, from the increase of the fruits of the yeare now gathered in.

Of Winter.

Winter is the next quarter, he's called in Latine *Hyems*, which seemeth to be derived of the Breake word *ui*, signifying to make moist

•Swallow, 1645.

02 west. This line is Capricorn, into which the Sun entreteth this yere on the 11 day of December, at 44 min. past 8 in the morning. The 6 deg. and 40 min. of Capricorne is then ascending, Mars is chiefe Dominatoz, with whom Iupiter is sharer, Saturne next, and the Sunne next.

Of the Eclipses.

THE first Eclipse visible in our Horizon this yere is of the Moone, the last day of *January* 8 min. past 5 in the Afternoone & endeth 29 min. past 8. The other of the Sun the 11 day of *August*, 19 minutes past 10 in the Fore-noone and endeth about halfe an houre past noone.

A Chronologicall note of some memorable Accidents, shewing how long it is since any of them happened.

Since	THE destruction of Ierusalem by <i>Titus</i> ,	1575
	A new Towne built whereabouts the old Ierusalem was, called <i>Ælia</i> ,	1510
	<i>Lucius</i> began his raigne, and in his time England received the Christian faith,	1468
	The first generall Councell,	1320
	Cambridge made an Vniversity,	1010
	England conquered by Duke <i>William</i> ,	579
	The first Major of London,	495
	The invention of Gunnes,	265
	The invention of Printing.	205

Swallow, 1645.

	The great Frost,	38
	The last blazing Starre;	27
	The great Plague in London,	20
	The Birth of our Prince <i>Charles</i> , May 30,	15
	The Lady <i>Mary</i> borne, Novemb. 4,	13
	The Duke of <i>Yorke</i> borne, Octob 15,	12
	Pauls Church began to be repaired,	11
	The Lady <i>Elizabeth</i> borne, Decemb. 28,	10
	The Lady <i>Anne</i> borne, March 17,	9

On the 27 of *March*, the 21 yeare of our King
beginneth, having then reigned 20 yeares com-
pleat.

VIVAT REX,
AMEN
DICAT GREG.

Swallow, 1645.

Of the foure Cardinall windes, together with
their effects in breeding or bringing
Sicknesses.

The East-wind called Subsolanus, breedeth
in cholerick bodie sharp feavers, raging
madnesse, & perillous Apostumations: in win-
ter it is ever cold, it bloweth seldome in the
night; and this one thing is proper to it, that
if it doe chance to bring raine, it continueth
commonly a whole day together.

The South-wind called Auster, is of nature
hot and moist, it breedeth corrupt humors, and
in hot bodie cramps, giddinesse in the head, or
the falling sicknesse, pestilence, & cruell fevers.

The West-wind called Favonius, is of nature
cold & moist, it breedeth Phlegme in moist bo-
dies, it procureth sleep breedeth Apoplexies and
the like. In the spring it greatly refresheth all
things, brings abroad the blood, and the sound
humors which lay hid in winter, much refresh-
ing y^e mind. Holobett nere the end of Autumn
when winter beginneth to approach, it then
growes churlish both on the sea and land.

The North-wind called Septentrio, is of na-
ture cold and dry, it is good against the Pest-
ilence, and yet in cold bodie it breedeth Plur-
sies, coughs, gout, & in some squinancies: yet
of all Winds it is held to be wholesomest, al-
though it be y^e sharpest in our winter moneths.

Note that what is spoken thus of their effects, is meant of their long standing in any of the said quarters.

Know also, that a continuall Still Summer, is a signe of
Plague or Earthquake.

ಕವಿ ಕೃಷ್ಣಶೇಷ ಕಟ್ಟಿರುವ ಹೊಸದಾದ ಕವನಗಳು: ಕವನಗಳ ಕೃಷ್ಣಶೇಷ ಕಟ್ಟಿರುವ ಕವನಗಳು

Of Blood-letting and some other Physicall
observations.

In youth, let Blood flow from the change to the first quarter.

In middle age, from the first quarter to the ful.

In elder yeares, from the full to the last quarter.

And in old age, frō the last quart, to y^e change.

But know, that under the age of 14 and above 56, is not good to bleed at all.

Again, in the Canicular or Dog-dayes it is very hurtfull to take any physick, unless there be great need: and indeed necessity hath no law. Wherefore in such a case, the disease being desperate, the cure must be adventured.

Take a purgation when the Moone is in Trine or Sextile aspect with Venus, decreasing in any of these three signes Cancer, Scorpio, or Pifces, and it will be sure to work the better ; because when a moist planet in a moist signe hath such an aspect, the humours in the body are then stirred up and down, and so the better purged out. Wherefore in this case it cannot be amisse to prepare humours by some thing

thing or other which is laxative : and let this be done whilst the Moon is either in Gemini, Libra, or Aquarius.

Take a vomit that it may work thoroughly, when the Moon is in Aries, Taurus, or Capricorn: And know, that the aspects of the Moon in Saturn, or Mars ; or the Moon in Leo, ought to be eschewed in the taking of medicines. Finally, if necessity urge no hast, these observations are expedient : for it is a plaine truth, that the change of weather upon differing Aspects, doth greatly change and alter our bodies.

Things good for the Eyes.

All green colours, cold water, Fenel, the water of white-roses distilled, Celendine, eye-bright, Herbine, Agremonie, Cloves : and for hot eyes the juyce of Houfleeke softly boyled in the shell of a new-laid Egge till it be cleane scummed, is very good.

Things ill for the Eyes.

To look much at red colours, or at fire, to read soon after supper : to eat Barlick, Onions, Radish-roots, salt-meats, coleworts, and pulse : as also to drinke Wine that is both thick and sweet. Smoke likewise and dust be very bad : and to anoint the eyes with Bats-bloud will cleane put them out; according to that old proverb, The bloud of a Batt will make a man see as well by night, as by day : which may well be true in him that cannot see at all.

Things

Swallow, 1645.

Things good for the Braine.

To smell to Camomill, Musk, or red-roses:
to wash the temples often with rose-water
to eat Sage measurably, to drinke wine not o-
vermuch, to keep the body warme, to wash the
hands often, to walke and sleep measurably, to
eat Mustard and Pepper, and not to be trou-
bled with too much noise.

Things ill for the Braine.

Late suppers, much sleep after meat, anger, to
smell to a white Rose, garlick, onyons, much
milk and cheese, to stand long against your use
bare-headed, to eat hastily and overmuch, to
eat too liberally on any kind of braines, much
sweat in labour or travell, and a besotted pra-
ctice or daily course in drinking.

Other Notes fit to be knowne.

Note that sixty minutes make one houre.

Forty and five minutes make three quarters of an houre.

Thirty min. make halfe an houre. Fifteene min. a quarter.

Twelve inches make one foot. 3 Feet, or 36 Inches, a yard.

Three feet and 9 inches, or 45 inches make an Ell.

Sixteene feet and 6 inches, make one Pole or rod to measure

Land withall.

Forty poles make one Furlong.

Eight Furlongs make one mile. Three miles one League.

The compasse of the whole Earth is held to be 21000 and

600 miles, containing the full and just number of 300 and

60 degrees, each degree being equall to threescore miles.

The Sunne in one houre goeth 900 miles, as some have de-
monstrated.

The compasse of England is held to be 1532 miles.

The

Swallow, 1645.

The longest day at London, is 16 houres and 30 minutes:
at Yorke 17, within two minutes, being 28 minutes longer then at London.

The longest day at Cambridge, is 16 houres and 34 minutes longer by foure min. then the day at London, and shorter by 84 minutes then the day at Yorke.

Observations concerning the Weather.

When the Sun riseth cleere, and not red, and is red at his setting, and when the Moon at her prime (which 3 dayes and 18 houres after the Change) appears faire and bright, it is a signe of faire weather: but if the Sun at his rising be fiery red, or a little after his rising with clouds, & at his setting be overcast with a myst, or go down behind a cloud; or if y^e horns of the Moon be blunt, or a blacknesse appeare in the midst of her, judge of foule weather.

Judgements of the weather by the Signe wherein the Moone shall be at the Change, Quarters, or Full.

If the Moon do either change come to the full or enter into her first or last quarter in Aries, Leo, or Sagitarius, in winter it commonly is faire weather: but in summer immoderate heat, and
the

Swallow, 1645.

The hotter if it happen in June, or July. At the
change, be at the full, or enter into the first or
last quarter in Taurus, Virgo, or Capricorne, in
winter judge of cold weather: but in summer
temperate weather. When the said times
change in Gemini, Libra, or Aquarius, judge of
much wind, especially in Autumn or spring.
If the Moon change, be at the full, enter into
the first or last quarter in Cancer, Scorpio, or
Pisces, in winter it foresheweth moist and rain
weather, or snow to follow; but in summer
pleasant & temperate weather to ensue. Thus
observing the foresaid tokens, it will for the
most part bring you to the knowledge of the
weather.

Observations for Husband-men and others.

In January take off superfluous branches
from Fruit-trees, and prepare your ground
for Gardens, uncover Tree-roots, cut your
Vines in some of the twelve dayes.

Set Quick-sets, Roses, and sallots in the
moneth of February. And now cover up the
cotes of your Trees with good earth, which
you opened before in the beginning of January.

In March you may Graft, but in planting
and grafting chuse a warme time: wherefore
let not the wind be in the East or North, before
saule

Swallow, 1645.

Because such winds are commonly nipping, especially being helped by any aspect of the Moone, with Saturne or Venus, in cold signes, as Virgo, Capricorn, Taurus, Scorpio, Pisces, or Cancer.

In the end of Aprill, or beginning of May, set and sow tender herbes and seeds in your gardens, in a good temperature of ayre.

If you meane to preserve flowers or seeds, gather them in a full Moone, let the sun shine first upon them, and they will keep the better: but let them not be dried in the sun, lest the sun draine away part of their vertue.

Remove young Trees either in the end of October, November, or February, the Moone increasing: and be sure to set that side South which was south before, because it cannot endure the cold North.

Sheare Sheepe the Moone increasing, and their fleeces will grow the better againe. The like observe for cutting of haire, the moone in Taurus, Virgo, or Libra.

Seld cattell the Moons in Aries, Sagittarius, or Capricorn, being in her last quarter.

Gather all Fruits that you meane to keepe, in a dry time, when the moone is at the full.

Sow all such Seeds as have round rootes (as Onions, Leeks, Turneps, &c.) either three or foure dayes before the full, or three or foure dayes after the full.

A Table of the Kings of England.

The yeare, moneth, and day, accounting the yeare to begin the first of Ianuary, on which each King since the Conquest began to reigne. The number of years, moneths, & dayes, that each K. and Q. reigned 28 dayes to a Mo. Teares expired since each King and Qu began and ended their severall Reigns.
